Singlsyn®

(Superior Flat Absolute Angle Sensor)
Extremely Thin Dimensions
Singlsyn realizes smallest mounting space because of its extremely thin thickness as a built-in structure.

Wide Temperature Range
–55 ~ +155°C
(Optional : High temperature type)

Robust for Hard Environments
• Vibration : 196 m/sec² (20G)
• Shock : 980 m/sec² (100G)
• Humidity : Up to 90% RH

High Rotational Speed
Up to 30,000 min⁻¹ (rpm)

High Reliability
Singlsyn has the similar structure to electric motors but has high reliability because of no winding coil on its rotor.

Sensing Absolute Position and Velocity
According to connection to an R/D converter or Smartcoder, it is capable of converting analog output signals of Singlsyn to digital position (angle) signals. The position signals are transmitted as the absolute position within a range of electrical one cycle.

Low Cost
Especially low cost is realized by reducing the number of parts to 1/10 compared with conventional resolvers.

For special cases, please consult us.
• Detection of a rotational position of a motor and a generator on a hybrid vehicle.
• Detection of a rotational position of a motor on an electric vehicle.

- Angle detection of a magnetic pole of a motor in an electrical power steering wheel.
- Angle detection for controlling a fuel valve (air valve)
- Angle detection for vector control of a high efficient induction motor
- Angle detection for rotational control of an AC motor (PM motor)
PRINCIPLE OF OPERATION

The contour of a rotor for Singlsyn forms specially curved air gap between its stator and the rotor, of which permeance is changed as a sinusoidal wave corresponding to an angle of the rotor shaft. One excitation winding and two output windings are placed in the stator. The two output windings detect a change of air gap between the rotor and the stator and produce output voltage with 2-phases proportional to sine and cosine of the angle of rotor. (Refer to Fig. 1 and Fig. 2)

Because the output signals of Singlsyn are the same as those of conventional resolvers and Smartsyns as shown in equation (2) and (3), they can be converted to digital angle data by using conventional resolver to digital (R/D) converters.

Singlsyn which produces twice angle output signals (2X type) has an elliptical shape of a rotor as shown in Fig. 3 (a). A rotor for 3X type is triangular and cross shaped for 4X type as shown in Fig. 3 (b) and 3 (c).

<Excitation Voltage>
\[ E_{R1-R2} = E \sin \omega t \]  

<Output Voltage>
\[ E_{S1-S3} = KE \sin \omega t \cdot \cos(X \cdot \theta) \]  
\[ E_{S2-S4} = KE \sin \omega t \cdot \sin(X \cdot \theta) \]  
where
K : Transformation Ratio  
t : Time (s)  
\( \theta \) : Shaft Angle (deg)  
f : Excitation Frequency (Hz)  
\( \omega \) : \( 2 \pi f \)  
E : Excitation Voltage (V)  
X : Multiplication Factor of Angle (X = 2, 3 or 4)
Tamagawa Seiki Co., Ltd. has been developing and manufacturing resolvers more than 40 years. The progress regarding the resolver was a history of reducing their size and cost at the same time.

Originally the military specifications of resolvers with brushes had two windings on both a rotor and a stator. Even after resolvers came through a brushless type and a built-in type, Smartsyn still needs four windings on a rotor, a stator and a rotary transformer (rotor and stator). Compared with these conventional resolvers, the newly developed VR (Variable Reluctance) type resolver needs the winding on a stator only. We named this new product Singlsyn.

---

**HISTORY OF DOWN-SIZING AND PARTS-REDUCTION OF A RESOLVER**

The structural differences between the conventional winding type brushless resolver (Smartsyn) and the newly developed Singlsyn are shown in Fig. 5.

## OUTLINE DIMENSIONS

### S10//TS2223N10 Series

- 2X : TS2223N12E102
- 3X : TS2223N13E102
- 4X : TS2223N14E102

### S15//TS2224N10 Series

- 2X : TS2224N12E102
- 3X : TS2224N13E102
- 4X : TS2224N14E102

### S21//TS2225N10 Series

- 2X : TS2225N12E102
- 3X : TS2225N13E102
- 4X : TS2225N14E102

All dimensions are described in millimeter.
MOUNTING METHOD AND ACCURACY

Mounting Method (Built-in type)

Mounting Accuracy

In case Singlsyn is mounted in rough accuracy, the performance of Singlsyn may not be fully performed. The eccentricity between a rotor and a stator affects its electrical accuracy as shown in the right table.

Allowable Axial Deflection

The deflection in the axial direction between a stator and a rotor should be within ±0.25 mm.

Cautions for use

- The excitation input voltage in the specification sheet is described as a rated value. It is no problem for Singlsyn to be used in a range from 3 V to 1.2 times of the rated voltage, but the frequency should be ±5% of the rated value. Or else its accuracy may be degraded.
- In case of presence of large noise source in the vicinity or in case of a long transmission line, basically twisted pair lines with shield in each pair should be used. Additionally a different amplifier should be used as a receiver if any noise is induced in output signals.
- If Singlsyn is mounted without eccentricity nor a tilt and a run-out for the shaft of a measuring object, some significant electrical errors may occur in output signals of the Singlsyn. Therefore users should take care of mounting Singlsyn mechanically as described in the above mounting method.
- If Singlsyn is connected to imbalanced loads for each output of 2-phases, two output voltages become imbalanced and may result in some electric errors. Therefore the loads of 2-phases should be in the same condition.
- In case of the presence of a strong external magnetic field around Singlsyn, it affects the magnetic flux in the Singlsyn and may result in some electrical errors. In this case please consider setting some shielding in the Singlsyn.
- If Singlsyn is used in the conditions of relative humidity of near 100% for a long time, the electrical insulation of the Singlsyn may gradually get worse. In such a case some protective cover for the Singlsyn is recommended.

**Smartcoder® AU6802N1**

**High-speed, Digital-Tracking, Complete Angle Detector**

**10/12-Bit Resolver-to-Digital Converter IC**

### Features

1. Vehicle-mount quality
   - Quality level: Transportation equipment involved with safety
   - Operating temperature range: \(-40 \sim 125^\circ\)C
2. High accuracy
3. Simple to use
   - Real time output (High tracking rate: \(240,000\, \text{min}^{-1}\) for 10 bit resolution)
   - Single power supply of DC5V (Integrated oscillator for exciting resolver: 10/20 kHz)
   - Small size and light weight (10 X 10mm, Pin interval: 0.65mm, 52pins TQFP, Mass. 0.3gram)
   - Built-in test (Abnormality detection) function
   - Pulse / Parallel / Bus serial output (Selectable)
   - Resolution of 10/12 bits (Selectable)
   - Capable to set the number of poles for UVW (Selectable from \(\times 1, 2, 3, 4\))
   - Clock input (20MHz): External CLK input / Crystal resonator / Ceramic resonator (Selectable)

---

**WARRANTY**

Tamagawa Seiki warrants that this product is free from defects in material or workmanship under normal use and service for a period of one year from the date of shipment from the factory. This warranty, however, excludes incidental and consequential damages caused by careless use of the product by the user. Even after the warranty period, Tamagawa Seiki offers repair service, with charge, in order to maintain the quality of the product. The MTBF (mean time between failures) of our product is quite long; yet, the predictable failure rate is not zero. The user is advised, therefore, that multiple safety means be incorporated in your system or product so as to prevent any consequential problems resulting from the failure of our product.
